| [5] Substance of equivalent concern | 5 5 (, , , , | | | |
| SECTION 4 FIRST AID MEASURES | | | | |
| SECTION 4 HINST AID WILASUNES | | | | |

4.1 Description of first aid measures

| Eye contact | Rinse cautiously with water for several minutes. Remove contact lenses, if present and easy to do. Continue rinsing. If irritation, blurred vision or swelling occurs and persists, obtain medical advice from a specialist. |
|----------------------------|---|
| Inhalation | If breathing is difficult, remove victim to fresh air and keep at rest in a position comfortable for breathing. If casualty is unconscious and: If not breathing, if breathing is irregular or if respiratory arrest occurs, provide artificial respiration or oxygen by trained personnel. Get medical attention if adverse health effects persist or are severe. Maintain an open airway. |
| | Wash with soap and water. Remove contaminated clothing and shoes. Handle with care and dispose of in a safe |
| Skin contact | manner. Seek medical attention if skin irritation, swelling or redness develops and persists. |
| | Accidental high pressure injection through the skin requires immediate medical attention. Do not wait for symptoms to develop. |
| | Always assume that aspiration has occurred. Do not induce vomiting. Can enter lungs and cause damage. If |
| | vomiting occurs, the head should be kept low so that vomit does not enter the lungs. Seek professional medical |
| Ingestion | attention or send the casualty to a hospital. Do not wait for symptoms to develop. |
| | Never give anything by mouth to an unconscious person. If unconscious, place in recovery position and get |
| | medical attention immediately. Maintain an open airway. Loosen tight clothing such as a collar, tie, belt or waistband. |
| | No action shall be taken involving any personal risk or without suitable training. It may be dangerous to the person providing aid to give mouth-to-mouth resuscitation. |
| | Before attempting to rescue casualties, isolate area from all potential sources of ignition including |
| Destaution of first states | disconnecting electrical supply. Ensure adequate ventilation and check that a safe, breathable atmosphere is |
| Protection of first-aiders | present before entry into confined spaces. |

4.2 Most important symptoms and effects, both acute and delayed

| Potential acute health effects | |
|--------------------------------|--|
| Eye contact | Eye contact may cause redness and transient pain. |
| Inhalation | Inhalation of oil mist or vapours at elevated temperatures may cause respiratory irritation. |
| Skin contact | No known significant effects or critical hazards. |
| Ingestion | May be fatal if swallowed and enters airways. |
| | |
| 4.3 Indication of any imme | diate medical attention and special treatment needed |

4.3 Indication of any immediate medical attention and special treatment neededNotes to physicianDue to low viscosity there is a risk of aspiration if the product enters the lungs. Treat symptomatically.Specific treatmentsAlways assume that aspiration has occurred.

| SECTION 5 FIRE FIGHTING MEASURES | |
|---|---|
| 5.1 Extinguishing media Suitable extinguishing media Unsuitable extinguishing media | Dry chemicals. Foam. Carbon dioxide (CO ₂). Water spray or foam. Do not use direct water jets on the burning product; they could cause splattering and spread the fire. Simultaneous use of foam and water on the same surface is to be avoided as water destroys the foam. |

5.2 Special hazards arising from the substance or mixture

| Hazards from the substance | In a fire or if heated, a pressure increase will occur and the container may burst. |
|----------------------------|---|
| or mixture | This substance will float and can be reignited on surface water. |
| Hazardous thermal | Incomplete combustion is likely to give rise to a complex mixture of airborne solid and liquid particulates, gases, |

decomposition products

5.3 Advice for firefighters

Special precautions for firefighters

Special protective equipment for fire-fighters

ACCIDENITAL DELEASE MAEA

APAR Industries Limited

including carbon monoxide, H2S, SOx (sulfur oxides) or sulfuric acid and unidentified organic and inorganic compounds.

Promptly isolate the scene by removing all persons from the vicinity of the incident if there is a fire. No action shall be taken involving any personal risk or without suitable training. Fire-fighters should wear appropriate protective equipment and self-contained breathing apparatus (SCBA) with

a full face-piece operated in positive pressure mode. Clothing for fire-fighters (including helmets, protective boots and gloves) conforming to European standard EN 469 will provide a basic level of protection for chemical incidents.

| SECTION 6 ACCIDENTAL RELEASE MEASURES | | | | |
|---|---|--|--|--|
| 6.1 Personal precautions, protective equipment and emergency procedures | | | | |
| For non-emergency personnel | Avoid breathing vapour or mist. Keep non-involved personnel away from the area of spillage. Alert emergency personnel. Except in case of small spillages, the feasibility of any actions should always be assessed and advised, if possible, by a trained, competent person in charge of managing the emergency. Stop leak if safe to do so. Avoid direct contact with the product. Stay upwind/keep distance from source. In case of large spillages, alert occupants in downwind areas. Eliminate all ignition sources if safe to do so. Spillages of limited amounts of product, especially in the open air when vapours will be usually quickly dispersed ,are dynamic situations, which will presumably limit the exposure to dangerous concentrations. Note : recommended measures are based on the most likely spillage scenarios for this material; however, local conditions (wind, air temperature, wave/current direction and speed) may significantly influence the choice of appropriate actions. | | | |
| For emergency responders | For this reason, local experts should be consulted when necessary. Local regulations may also prescribe or limit actions to be taken. Small spillages: normal antistatic working clothes are usually adequate. Large spillages: full body suit of chemically resistant and thermal resistant material should be used. Work gloves providing adequate chemical resistance, specifically to aromatic hydrocarbons. Note : gloves made of PVA are not water-resistant, and are not suitable for emergency use. Safety helmet, antistatic non-skid safety shoes or boots. Goggles and /or face shield, if splashes or contact with eyes is possible or anticipated. Respiratory protection : A half or full-face respirator with filter(s) for organic vapours (and when applicable for H2S) a Self Contained Breathing Apparatus (SCBA) can be used according to the extent of spill and predictable amount of exposure. If the situation cannot be completely assessed, or if an oxygen deficiency is possible, only SCBA's should be used. | | | |
| 6.2 Environmental precautions | Prevent product from entering sewers, rivers or other bodies of water. If necessary dike the product with dry earth, sand or similar non-combustible materials. In case of soil contamination, remove contaminated soil and treat in accordance with local regulations. In case of small spillages in closed waters (i.e. ports), contain product with floating barriers or other equipment. Collect spilled product by absorbing with specific floating absorbents. If possible, large spillages in open waters should be contained with floating barriers or other mechanical means. If this is not possible, control the spreading of the spillage, and collect the product by skimming or other suitable mechanical means. The use of dispersants should be advised by an expert, and, if required, approved by local authorities. | | | |

| 6.3 Methods and material for containme and cleaning up | ent |
|--|---|
| Small spill Large spill | Stop leak if without risk. Absorb spilled product with suitable non-combustible materials. Large spillages may be cautiously covered with foam, if available, to limit vapour cloud formation. Do not use water jet. When inside buildings or confined spaces, ensure adequate ventilation. Transfer collected product and other contaminated materials to suitable containers for recovery or safe disposal. |
| 6.4 Reference to other sections | See Section 1 for emergency contact information. See Section 8 for information on appropriate personal protective equipment. See Section 13 for additional waste treatment information. |
| SECTION 7 HANDLING AND STORAGE | |
| 7.1 Advice on general occupational hygiene Storage | Ensure that proper housekeeping measures are in place. Contaminated materials should not be allowed to accumulate in the workplaces and should never be kept inside the pockets. Eating, drinking and smoking should be prohibited in areas where this material is handled, stored and processed. Wash hands thoroughly after handling. Change contaminated clothes at the end of working shift. See also Section 8 for additional information on hygiene measures. |
| 7.2 Conditions for safe storage, including any incompatibilities | Storage area layout, tank design, equipment and operating procedures must comply with the relevant regional, national or local legislation. Storage installations should be designed with adequate bunds in case of leaks or spills. Cleaning, inspection and maintenance of internal structure of storage tanks must be done only by |

| | properly equip | ped and qualified personnel as defined by national, local or company regulations. |
|--|---|--|
| SECTION 7 HANDLING AND STORAG | E | |
| including any incompatibilities Recommended synthetic mat specification a Keep only in t closed and sea must be caref flammable/com | | ly from oxidising agents. If materials for containers, or container linings use mild steel, stainless steel. Not suitable : Some erials may be unsuitable for containers or container linings depending on the material nd intended use. Compatibility should be checked with the manufacturer. The original container or in a suitable container for this kind of product. Keep container tightly led until ready for use. Do not store in unlabelled containers. Containers that have been opened fully resealed and kept upright to prevent leakage. Empty containers may contain harmful, mbustible or explosive residue or vapours. Do not cut, grind, drill, weld, reuse or dispose of ess adequate precautions are taken against these hazards. Store locked up. Protect from sunlight. |
| 7.3 Specific end use(s) | Not available | |
| Recommendations | | |
| Industrial sector specific solutions | | |
| SECTION 8 EXPOSURE CONTROLS / | PERSONAL PRO | TECTION |
| The list of Identified Uses in Section 1 should | be consulted for an | y available use-specific information provided in the Exposure Scenario(s). |
| 8.1 Control parameters | | |
| Occupational exposure limits | | |
| Product/Ingredient name | | Exposure limits values |
| Distillates (petroleum), Hydro treated Heavy | Naphthenic | AFS 2015:7 (Sweden, 12/2015). |
| Oil mist | | TWA: 1 mg/m ³ 8 hours. Form: mist and fume STEL: 3 mg/m ³ 15 minutes. Form: mist and fume [<i>Air contaminant</i>] AFS 2015:7 (Sweden, 12/2015). TWA: 1 mg/m ³ 8 hours. Form: mist and fume |
| | | STEL: 3 mg/m ³ 15 minutes. Form: mist and fume |
| monitoring the necessi as the foll exposure b European S atmosphere biological a | | tt contains ingredients with exposure limits, personal, workplace atmosphere or biological y be required to determine the effectiveness of the ventilation or other control measures and/or o use respiratory protective equipment. Reference should be made to monitoring standards, such ng: European Standard EN 689 (Workplace atmospheres - Guidance for the assessment of nhalation to chemical agents for comparison with limit values and measurement strategy) dard EN 14042 (Workplace Guide for the application and use of procedures for the assessment of exposure to chemical and nts) European Standard EN 482 (Workplace atmospheres - General requirements for the of procedures for the measurement of chemical agents) Reference to national guidance |
| 8.2 Exposure Control Appropriate engineering Controls | Mechanical ve construction o | methods for the determination of hazardous substances will also be required. entilation and local exhaust will reduce exposure via the air. Use oil resistant material in f handling equipment. Store under recommended conditions and if heated, temperature control puld be used to avoid overheating. |
| Individual protection measuresWash hands, for before eating, stations and saHygiene measuresstations and sa | | prearms and face thoroughly after handling chemical products, smoking and using the lavatory and at the end of the working period. Ensure that eyewash fety showers are close to the workstation location. Wash contaminated clothing before reuse. d: Safety glasses with side shields. |
| Eye/face protection | | |
| Skin protection | 4 - 8 hours (bre | eakthrough time): nitrile rubber |
| Hand protection Body protection | Wear protectiv shift. | ve clothing if there is a risk of skin contact. Change contaminated clothes at the end of working |
| Other skin protection | performed and | otwear and any additional skin protection measures should be selected based on the task being the risks involved and should be approved by a specialist before handling this product. |
| Respiratory protection | safe working li an approved st Emissions fror requirements | action must be based on known or anticipated exposure levels, the hazards of the product and the mits of the selected respirator. Use a properly fitted, particulate filter respirator complying with candard if a risk assessment indicates this is necessary. In ventilation or work process equipment should be checked to ensure they comply with the of environmental protection legislation. In some cases, fume scrubbers, filters or engineering to the process equipment will be necessary to reduce emissions to acceptable levels. |
| Environmental exposure controls | mounications | in the process equipment will be necessary to reduce emissions to acceptable levels. |
| | | |

| Ingestion | May be fatal if swallowed and enters airways. | | | |

APAR Industries Limited

Safety Data Sheet Regulation (EC) No. 1907/2006 (REACH), Annex II, as amended by Commission Regulation (EU) 2015/830.

| Potential chronic health effects | |
|------------------------------------|--|
| General | No known significant effects or critical hazards. |
| Carcinogenicity | The base oil(s) in this product is based on an severely hydrotreated distillate. The product should not be |
| | regarded as a carcinogen. |
| Mutagenicity | No known significant effects or critical hazards. |
| Teratogenicity | No known significant effects or critical hazards. |
| Product/ingredient name | No known significant effects or critical hazards. |
| Fertility effects | No known significant effects or critical hazards. |
| Other information | Not available. |
| Specific hazard | |
| SECTION 12 ECOLOGICAL INFORMATI | ON |
| 12.1 Toxicity | Not expected to be harmful to aquatic organisms. |
| 12.2 Persistence and degradability | Not inherently biodegradable. |
| 12.3 Bioaccumulative potential | Bioaccumulation is unlikely to be significant because of the low water solubility of this product. |
| 12.4 Mobility in soil | Not considered mobile. |
| 12.5 Results of PBT & vPvB | Not applicable. |
| Assessment | |
| 12.6 Other adverse effects | Insoluble in water. Spills may form a film on water surfaces causing physical damage to organisms. |
| | Oxygen transfer could also be impaired. |

SECTION 13 DISPOSAL CONSIDERATIONS

The information in this section contains generic advice and guidance. The list of Identified Uses in Section 1 should be consulted for any available use-specific information provided in the Exposure Scenario(s). 13.1 Waste treatment methods Product Methods of disposal Where possible (e.g. in the absence of relevant contamination), recycling of used substance is feasible and

recommended. This substance can be burned or incinerated, subject to national/local authorizations, relevant contamination limits, safety regulations and air quality legislation. Contaminated or waste substance (not directly recyclable): Disposal can be carried out directly, or by delivery to qualified waste handlers. National legislation may identify a specific organization, and/or prescribe composition limits and methods for recovery or disposal. Yes

Hazardous waste

SECTION 13 DISPOSAL CONSIDERATIONS European waste catalogue (EWC) Waste code Waste designation 13 03 07* mineral-based non-chlorinated insulating and heat transmission oils Packaging

| Methods | of disposal |
|---------|-------------|

The generation of waste should be avoided or minimised wherever possible. Waste packaging should be recycled. Incineration or landfill should only be considered when recycling is not feasible.
